

Fiberglass Accessories

Couplings, Manway Lids, and Riser Pipes

Fiberglass solution from the tank top to the equipment at grade.

Problem

Metallic surfaces have always corroded. With the increasing use of biofuels and ULSD, these surfaces are now even more prone to accelerated corrosion from microbial activity in UST's and tank sumps. Repairing and replacing corroded equipment is quickly becoming a major expense for tank owners.

Solution

Fiber Glass Systems provides complete line of UL Listed fiberglass tank top accessories including: fiberglass couplings for use in the primary tank and annular space, 25 in. fiberglass manway lid, and Red Thread IIA riser pipes. Together this eliminates potential problems associated with corrosion along the tank top or inside the tank sump.

Fiberglass accessories are not vulnerable to the corrosion inherent in storing highly corrosive Emerging Fuels which results in a lower life cycle cost to the tank owner.

Standard Accessories

- Fiberglass tank couplings for primary and annular spaces

Optional Accessories

- 25 in. fiberglass manway lid with fiberglass couplings
- Red Thread IIA riser pipe assembly kits
